FOR THE LIFE OF YOUR RIDE

POLARIS ENGINEERS PARTS THAT PUSH THE LIMITS WITHOUT SACRIFICING STRENGTH AND DURABILITY. We build our products so anyone with the right tools can maintain their vehicle from their own garage - and get them back on the trails where they belong.

MAINTENANCE TIP

BREAK-IN PERIOD

The break-in period for your new RZR is the first 25 hours of operation, or the time it takes to use the first two tanks of fuel. No single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine.

NOTICE: Excessive heat build-up during the first three hours of operation will damage close-fitted engine parts. Do not operate at full throttle or high speeds for extended periods during the first three hours of use.

AIR FILTERS

A clogged air filter can restrict air flow to the engine leading to reduced engine performance, engine life or catastrophic failure.

BRAKE PADS

Maintaining and/or replacing brakes are critical to the safety and functionality of a vehicle. Brake pads should be checked for wear and oil or grease (petroleum products) contamination and brake discs should be checked for cracks, excessive corrosion or warping.

HALF SHAFT

Check for tear and punctures in the boot which can lead to CV joint wear that can contribute to axle failure.

DRIVE BELTS

Polaris Engineered belts deliver unmatched performance for your off-road vehicle. Developed and tested on all our engines for all environments and conditions. Check your belt for delamination, hour glassing and glazing.

BREAK-IN PERIOD

- Use lower gear (if available) while varying speeds and avoiding wide open throttle for 8-16 km
- If no low gear is available, vary at moderate speeds while avoiding wide open throttle for 80 km

OUR INVESTMENT

- 32,187 km of field testing
- Thousands of dyno hours
- 18+ months of development (13,000+ design hours) per belt
- 1,500+ vehicle validation hours
- Collaboration with powertrain & clutch engineers

YOUR ADVANTAGE

- No clutch recalibration
- Less wear & tear due to heat
- Ensure maximum vehicle performance
- More time riding, less time wrenching
- Produced in collaboration with powertrain and clutch engineers to ensure a perfect fit, maximum performance and ultimate durability

BATTERIES

To ensure a battery maintains its level of charge when unused for extended periods of time or during freezing weather, the battery should be connected to a BatteryMINDER, P. 90. Be sure to check for corrosion from the terminals to the ends of the cables.

OIL FILTERS

Change oil filters with every oil change to provide the best engine protection and keep the engine operating at peak performance.

FOR THE LIFE OF YOUR RIDE ONLY THE BEST WILL DO

To create the best oil for any terrain, we invest in rigorous testing to ensure our oil delivers the consistency and performance you demand.

WHAT COUNTS IN OIL TESTING:

1. Does it protect the engine at high temperatures?
2. Does it keep the engine free from carbon and buildup?
3. Does the oil hold its viscosity over time?

ENGINE CHECKPOINTS

Polaris engineers focus on key areas within the engine when evaluating engine oil and its ability to protect the life of your ride. Critical checkpoints include:

PISTON RINGS & RING LANDS: Extreme pressure to these parts require high lubricant film strength. Poor oxidative performance can lead to carbon and varnish buildup, which results in poor ring seal and fuel dilution of the oil. These can result in loss of power and accelerated engine wear.

ROD BEARINGS: Engine bearings on an oil with low film strength and thinner viscosity can lead to premature wear or even engine failure.

CAMSHAFT: Direct acting overhead camshafts are used on many Polaris engines. In this application the camshaft pushes directly on the valve, creating very high contact pressures compared to other camshaft configurations. These forces are so great that inferior oil can break down leading to increased wear and potential engine damage.

TIRE SEALANT

HOW IT WORKS

Tire sealant remains liquefied inside your tire until a leak develops in the tire or wheel.

Once a leak occurs, the tire sealant rushes out of the tire and quickly creates a permanent solid plug.

The plug maintains the pressure of the tire so you can continue your ride.

HOW MUCH TIRE SEALANT DO YOU NEED?

$$\begin{array}{c} \text{TIRE HEIGHT (IN.)} \\ | \\ \text{Ex: } 27'' \end{array} \times \begin{array}{c} \text{TIRE WIDTH (IN.)} \\ | \\ 10'' \end{array} / 5 = \begin{array}{c} \text{OUNCES REQUIRED PER TIRE} \\ | \\ 54 \text{ oz.} \end{array}$$

PREMIUM TIRE SEALANT

- Instantly seals and repairs rim, bead leaks, and punctures up to 0.64 cm on standard tires, and 1.9 cm on heavy ply tires
- Helps maintain air pressure for the life of the tire
- Helps seal the tire bead against the wheel
- 100% water soluble for easy cleanup
- Will not rust, corrode, or pit wheels
- Creates permanent repair
- Remains fluid and effective in temperatures down to -43° C
- Easily installed through existing tire valve stem with valve core removed
